公司简介

Company⁺

Introduction

西索润滑技术有限公司，是一家专业研发、生产与销售集中润滑系统和液压设备的高新技术企业，公司生产的集中润滑系统具有稳定性高、可靠性强、密封性好、输出压力高等特点，现销售的产品和服务已覆盖石油化工、风力发电、农业机械、工程机械、轨道交通、医药等行业，是行业内领先的方案解决供应商。

公司秉承“诚信为本，质量第一，用户至上，不断创新”的理念，为客户提供A+的理想解决方案，来满足客户的不同需求，通过多年的研究及生产实践，从产品设计、配件选择、产品组装、成品测试及销售服务方面，保证产品品质。

递进式润滑系统 Progressive lubrication system

适用于润滑剂为稀油、流动脂、脂的高压大型系统
 For oil, fluid grease and grease lubrication system

特点

- 结构紧凑、拓展容易
- 可加载检测功能
- 管路通畅无残留
- 宽剂量范围
- 分配器内部集成单向阀

Characteristic

- Compact, flexible kit
- Monitored function
- Channels flow through completely
- Wide range of use
- Integrated return valve inside

系统组成

- 手动泵、气动泵、电动泵
- 主管路
- 递进式分配阀
- 分管路
- 螺纹接头
- 控制和监测装置

The system components

- Manual, pneumatic and electrical pumps
- Main lines
- Progressive distributor
- Line to the lubrication point
- Screwed fittings
- Control and monitoring devices

功能原理

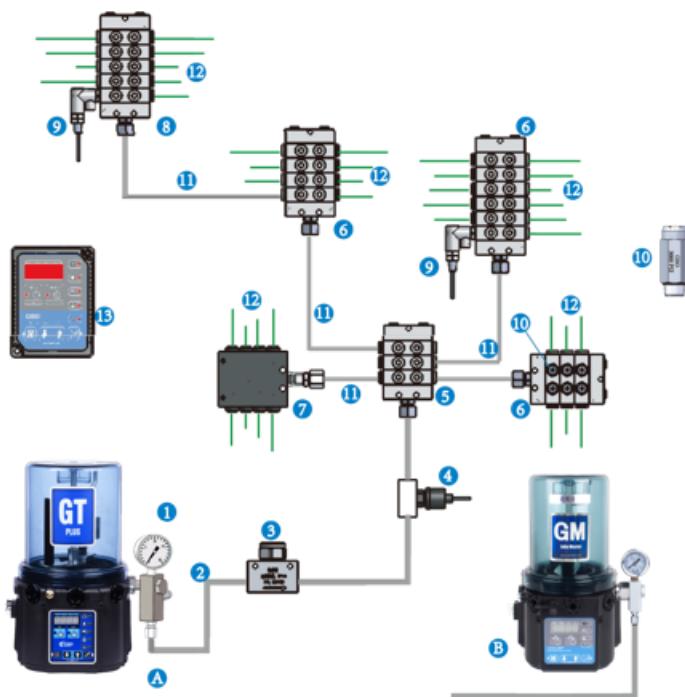

泵使润滑剂从主管路，流向各级递进式分配器，“递进式”的输送到各个润滑点。
 递进式分配器的工作循环由目视或者电子控制系统来监控

The function

The lubricant is pumped through the main lines to the progressive distributor with the pump.
 The lubricant is delivered "progressively" to the friction point.
 The circulation of a progressive distributor is monitored optically or electrically.

Lubrication system

递进式润滑系统概述 progressive lubrication system description

1. 结构和设计原理 Construction and design:

递进式润滑系统由润滑泵和多个递进式分配器组成。分配器配备一个循环监控器。后面连接必要的管路、管衔接件和固定元件。压力监测指示器安装在每个递进式的分配器入口处，对功能控制更加有保障。

The progressive lubrication system comprises a feed pump and progressive distributors, whereby, the distributor is equipped with a circulation control . In addition there are the necessary pipelines, threaded pipe fittings and fastening components. Pressure indicator in the inlet of the respective progressive distributor, are additionally helpful for function control.

系统的设计取决于要连接的润滑点的数量和润滑脂剂量的要求。如果一个分配器不能满足所有的润滑点，那么就必须设计一个分配器作为主分配器，主分配器连接次级分配器，整个系统最多可以有三级分配器。

The design of the system depends on the number of lubrication points to be connected and the grease dose requirements. If a distributor cannot meet all the lubrication points, then a distributor must be designed to act as a primary distributor, and the primary distributor is connected to the secondary distributor, and the whole system can have up to three levels of distributors.

润滑泵安装在机器上较易触及的地方，这样才可能适时方便地为润滑泵油箱注油。递进式分配器则要尽可能接近润滑点。

The lubrication pump should be assembled on an easily accessible position of the machine, so that uncomplicated refilling of the container is possible. The progressive distributor should be assembled as close to the lubrication points as possible.

管路的设计必须能够承受最大泵压，最好使用钢管。如果有需要移动的润滑点，需使用适合尺寸的高压软管，长度尽可能地短，以保证剂量准确。因为软管高压下会膨胀，增加管路对润滑剂的损耗，致使短暂剂量不能保证。缩短高压软管的使用，还可以避免快速高压对润滑剂产生的负面反应。

The line system must be designed such that it can take maximum pump pressure. Preferably steel pipes are laid. If mobile lubrication points are to be lubricated, high pressure hoses of appropriate dimension must be used. The length of the high pressure hoses should be kept as short as possible, as these expand under pressure and can intake appropriate lubricant quantity. Timely secure feeding of the lubricant is thus no longer guaranteed. Moreover, like for air inclusions, a quick pressure suppression, which may affect the lubricant adversely, is prevented. Only lubrication lines, i.e. lines directly leading from the distributor to the lubrication point, can be laid in polyamide pipe, if it is ensured that the permissible operating pressure of the pipe shall not be exceeded.

建议根据管路长度来考虑管路尺寸，以便保证较低的工作压力（小于80bar）。低压泵对整个系统的运行更加有益。高压会使得润滑剂变性，所以气动泵必须尽量选择低压泵。线路中加设节流阀同样有降低泵压的效果。it is recommended to select the cross sections of the pipeline according to the length of the pipes so that only little operating pressure (less than 80 bar) is required. Slow action pumps are beneficial. Higher pressure changes the lubricants adversely. Hence, possibly low operating pressure must be selected in the pneumatic pumps. The pumping pressure can also be reduced through a throttle in the air line.

2. 工作模式 Mode of action:

泵将润滑剂注入主管路、各级分配器、管路，直至润滑点。计量元件控制润滑剂的剂量，系统内集成监控元件。₃

递进式润滑系统概述 progressive lubrication system description

例如，分配器不工作、或由分配器内计量螺栓污浊失灵，可以由循环监控检测出来，系统报错，即循环监控在监控时间内无报告信号。

The lubricant is pumped into the main line by actuating the pump and fed to the connected progressive distributor. The lubricant is distributed over the number of outlets of the distributor and then delivered to the lubrication points or fed to another downstream progressive distributor, divided there and dispensed to the connected lubrication points. Dosing is done as per the selection of the dosing elements with different flow rates. A circulation control detects every circulation of the system. If a progressive distributor cannot deliver its lubricant or if a piston is blocked e.g. due to contamination, the system reports fault i.e. the circulation control has not reported within the monitoring time.

Particularly for large systems, which are operated with grease, it is essential to start the system step-wise from the lubrication point to the pump i.e. lubrication points, lines and progressive distributor must be pre-filled individually. The pressure requirement of individual segments of the system can thus be checked directly. Pay attention that the lubricant is refilled on time, for preventing air bubbles in the system. Else the complete system must be re-ventilated.

3.启动 Start-up:

启动前，必须用洁净的注油装置或者注油桶泵向泵内注油。确保注油过程中没有气泡。润滑泵配置随动活塞，来保证润滑剂的清洁无气。接下来依次给泵和递进式分配器排气，连续泵出润滑剂直至无气的润滑剂流出，至主分配器所有出口，再至各级分配器。

特殊情况例如以脂作为润滑剂的大型设备润滑系统，需要从润滑点、递进式分配器至泵分别填充洁净润滑剂，由此测定系统各部分的压力。保证润滑剂及时补充添加，避免系统进气，否则系统需要重新排气。

Before start-up, the pump must be filled with clean grease without any air bubbles. It is important that the pump is filled using a filling or barrel pump. The barrel pumps must be equipped with follow_x0002_up piston. Clean and air-bubble-free filling can thus be ensured. A cartridge pump with pre-filled cartridges may also be used for small consumption quantities.

Then the pump and subsequently the progressive distributor must be ventilated. Pumping follows till bubble-free lubricant appears first on the pump and then on all the outlets of the main distributor and subsequently on the downstream progressive distributors.

Particularly for large systems, which are operated with grease, it is essential to start the system step-wise from the lubrication point to the pump i.e. lubrication points, lines and progressive distributor must be pre-filled individually. The pressure requirement of individual segments of the system can thus be checked directly. Pay attention that the lubricant is refilled on time, for preventing air bubbles in the system. Else the complete system must be re-ventilated.

4.安装 Assembly:

递进式分配器的安装表面必须平坦，这样在栓紧时外壳不会变形。有需要的话，可以使用垫圈来校准。

递进式分配器的所有出油口必须保持通畅。确保绝对的洁净，泵、递进式分配器、特别是管路及连接件必须在安装前清洁完毕。

The fastening surface of the progressive distributor must be plane, so that the housing is not braced while screwing. If required, washers may be required for alignment.Outlet bore of the progressive

递进式润滑系统概述 progressive lubrication system description

distributor must be closed. Cleanliness must be observed. Pumps, progressive distributor and particularly the pipelines and fittings must be cleaned thoroughly prior to the assembly.

5.润滑剂 Lubricant:

一般来讲，递进式润滑系统选用矿物脂作为润滑剂，粘度高于265 (1/10mm) , NLGI-000-2.如非必要，尽可能不要使用混合油脂。如必须使用混合油脂，则需保证同属一类矿物皂基。

Generally, grease can be dispensed based on mineral oil that shows a walk penetration more than 265 (1/10 mm), NLGI-Klasse 000 - 2 in the bielomatik progressive lubrication system. Greases must not be mixed. In exceptional case.

6.维修保养及故障检修 Maintenance:

定期检查系统的密封性和油箱储量

若循环监视器响应，原因可能是：

- a) 油箱或各个油桶无油
- b) 泵未排空或者故障
- c) 系统由于高压产生堵塞
- 润滑管路不通
- 润滑点及附近管路不通
- 随意关闭递进式分配器的某些出油口
- 递进式分配器的活塞卡住 (变形或污损)
- 递进式分配器中的导管关闭
- 递进式分配器中所有的活塞处于中位

如果系统产生堵塞，故障可能出现在系统的很多地方。堵塞处会过压，栓销会凸出，由此来定位分配器附近的堵塞点

Impermeability of the system and the container fill level must be checked at regular intervals. A fault occurs if the circulation control has not responded within the monitoring time.

Reasons:

- a) Container or barrel empty.
- b) Pump not ventilated or defective.
- c) System blocks at high pump pressure.
- Lubrication line closed
- Lubrication point or its channel closed
- Outlet on the progressive distributor closed
- unauthorised
- Piston in the progressive distributor fits tightly (bracing, contamination)
- Channel within the progressive distributor closed due to contamination.
- All pistons of a progressive distributor are at centre position.

In case the system is blocked, fault may occur at any location in the system. There is overpressure at the blocked location, which is signalled to the relevant pressure indicator by a protruding pin. Source of fault can thus be localised on a secondary distributor.

先进的设计和解决方案

DESIGN AND ADVANCED SOLUTIONS

GT 是一款高压柱塞泵，最多可配五个泵元件。其设计特别

适用于递进或者单线系统，

GT is a piston pump,predisposed to operate with a maximum
of five pumping units,Its design is particularly suitable for
progressive systems or single-line systems.

可同时给五个独立线路润滑

Five independent line lubrication at the same time.

出口可合并增加排量

Output can be combined and increase displacement

特殊的本体材料，达到非常优异的抗震功能

With special materials, to achieve excellent anti-shock ability

特别的泵罐设计，易于观察油位并能有效阻隔紫外线照射，有效防止润滑油变质

具备低液位内部报警，带闪烁蜂鸣。也可以选择信号输出

Special design of pump make it easy to observe the oil level and prevent UV
radiation, prevent oil deterioration.With low liquid level alarm,flashing buzzer. Also
can choose the type of output.

具备两种型号模式 There are two model modes:

标准：由外部PLC管理。不带内置控制单元，因此是润滑系统中更加经济的解决方案。

Standard: can be managed by an external PLC. Since it does not come with an
internal control unit, this is the most economic solution for lubricating your systems.

自动：带集成控制系统，可本地设置运行时间。配备本地运行及报警指示灯，报警
带蜂鸣，提供低液位及脉冲报警，可与分配元件的监控器组合成一套完美的运行系
统。

Automatic: With integrated control system, which can be set up local running
time.Equipped with local operation and alarm light, alarm with buzzer, provide low
level and pulse alarm, which can be combined with the monitor of distribution units
into a perfect operating system.

紫外线照射，防止润滑油变质。

具备低液位内部报警，带闪烁蜂鸣，也可以选择信号输出。

GW pump is a piston pump predisposed to operate with a maximum of five pumping units, its design is particularly suitable for progressive systems or single-line systems.

Five independent line lubrication at the sametime. Output can be combined and

increase displacement With special materials, to achieve excellent anti-shock ability

Special design of pump make it easy to observe the oil level and prevent UV radiation,

prevent oil deterioration. With low liquid level alarm, flashing buzzer. Also can choose the type of output.

具备两种型号模式

标准：由外部PLC管理。不带内置控制单元，因此是润滑系统中更加经济的解决方案。

自动：带集成控制系统，可本地设置运行时间。配备本地运行及报警指示灯，报警带蜂鸣，提供低液位及脉冲报警，可与分配元件的监控器组合成一套完美的运行系统。

Standard: can be managed by an external PLC. Since it does not come with an internal control unit, this is the most economic solution for lubricating your systems.

Automatic: With integrated control system, which can be set up local running time. Equipped with local operation and alarm light, alarm with buzzer, provide low level and pulse alarm, which can be combined with the monitor of distribution units into a perfect operating system.

- CE认证

CE certification

VSP模块化递进分配阀 VSP modular distribution valve

西索VSP 模块化分配阀能够保证精确的润滑，并且适用于各种苛刻工况，是一款完美的润滑剂分配解决方案

VSP modular distribution valve can ensure accurate lubrication, and is suitable for all kinds of harsh conditions, is a perfect lubricant distribution solution
分配器分为两个主要部件：

- 底板 (至少由三个元件构成)
- 分配阀 (有单出口和双出口版本)。

The divider consists of two main parts:

- THE BASE (consisting of a minimum of three elements)
- THE METERING VALVES (available with both a single outlet as well as a double one)

为了最大化设备的性能，可以使用电子监控元件来检测系统是否发生故障或受阻。

To maximize the performance of the plant, it is crucial to use electrical monitoring elements that detect malfunctioning or system blockage.

由于系统具有良好的模块化性质，因此能够很方便地进行扩展，更改分配器元件时也不需要拆解润滑管路，确保了更快的响应速度和更低的维护成本。分配器的模块化能够根据设备的需要对润滑点进行分组。

Thanks to its modularity, the system can be easily expanded and replacement of metering elements can occur without removing the pipework, thereby guaranteeing low maintenance costs. The modularity of the dividers furthermore allows you to bundle lubrication points according to system requirements.

典型应用：汽车、工业设备、风电、工程机械等

Typical applications: automobile, industrial equipment, wind power, construction machinery, etc

模块式整体提供、为客户节约装配时间

DSS 分配器

紧凑型块式递进式计量装置
固定排量

最大工作压力 - 5076 psi (350 bar, 35 MPa)

整体式无泄漏高压分配阀

Integral Leakless High Pressure Distributor Valve

DSS是一种单块式递进分配器，是狭窄空间的最好选择。有6, 8, 10, 12, 14, 16, 18, 20和22个出口各款产品可供选择，每个出口流量0.2 cm³/循环(0.01 in³/循环)

The DSS is a single block progressive divider valve that is ideal for applications where space is limited.

It is available in 6,8,10,12,18,20 and 22 outlet versions, each with an output of 0.2 cm³ inch per cycle.

通过移走一个堵头，换成目视或者电子监控装置，可以实现目视或电子监控。油脂被泵入计量阀后，递进式计量阀中柱塞依次动作，等量地将油脂分配到每一个出口。

Visual or electronic monitoring can be achieved simply by removing a plug and installing a visual or electronic add-on device. The spools in a progressive metering valve operate sequentially partitioning equally across the outlets, the grease being pumped into the metering block inlet.

如果一个润滑点被堵，所有点将停止工作，从而让用户用一个监控装置就可以监控整个系统。

In case a single output becomes blocked, the pistons stop their activity allowing for the control of the entire system by means of a single device for this purpose.

阀体内部无斜孔，不可交叉或内部不可并孔。可使用普通卡套接头，是润滑系统方案中比较经济的选择。

There is no diagonal hole inside the valve body, and the outlet cannot be crossed or combined inside. Common outlet connector can be configured, which is a more economical choice for the lubrication system scheme.

特点与优势

Features and benefits

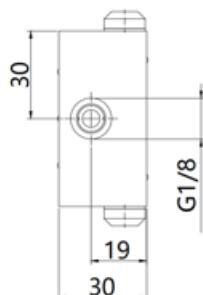

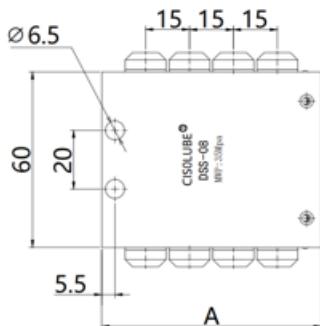

- 整体式设计，高压力

整体式无泄漏高压分配阀**Integral Leakless High Pressure Distributor Valve**

DSP是一种单块式递进分配器，是狭窄空间的最好选择。

有6, 8, 10, 12, 14, 16 ,18, 20和22个出口各款产品可供选择，每个出口流量0.2 cm³/循环(0.01 in³/循环)

The DSP is a single block progressive divider valve that is ideal for applications where space is limited.

It is available in 6,8,10,12,18,20 and 22 outlet versions, each with an output of 0.2 cm³ inch per cycle.

任意出口在安装堵头后可以和相邻的下一个出口相连，实现流量叠加。

The single output of the dosing device may be combined with the one located adjacent by eliminating the special fitting and applying a plug.

An outlet can also be merged with the sequential outlet on the block by removing the special outlet fitting and installing a plug.

通过移走一个堵头，换成目视或者电子监控装置，可以实现目视或电子监控。油脂被泵入计量阀后，递进式计量阀中柱塞依次动作，等量地将油脂分配到每一个出口。

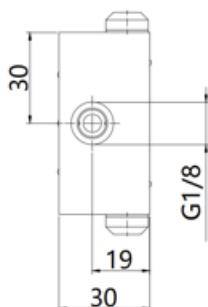

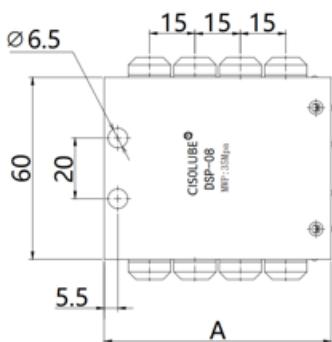

Visual or electronic monitoring can be achieved simply by removing a plug and installing a visual or electronic add-on device as shown below. The spools in a progressive metering valve operate sequentially partitioning equally across the outlets, the grease being pumped into the metering block inlet.

如果一个润滑点被堵，所有点将停止工作，从而让用户用一个监控装置就可以监控整个系统。

The grease pumped inside of the block is distributed by the piston dispensers of the progressive dosing device equally among the different outputs. In case a single output becomes blocked, the pistons stop their activity allowing for the control of the entire system by means of a single device for this purpose.

最大工作压力 - 3600 psi (250 bar, 25 MPa)

特性

Characteristics

- 可以输送稀油和油脂

Operation with oil and grease

- 紧凑性使其尤其适合用于有限空间

Compactness makes it particularly suitable for use in limited spaces

- 内置出口单向阀，可确保每次润滑剂加注流量精确无误

The built-in check valve can ensure the accuracy of each lubricant filling flow

- CE认证

CE certification

适用于稀油和干油递进式分配的计量元件

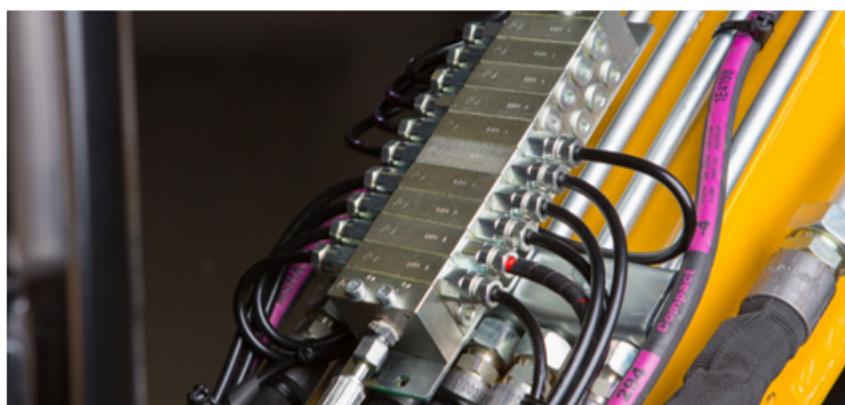

Divider elements for THE volumetric distribution of oils and grease

一组典型的VB分配阀包含一片“首片”、一片“尾片”和3至10片工作片组成。可以提供3至20个润滑点的润滑，VB分配阀的工作片，有各种规格的排量以供选择。双出口工作片（在工作片的规格数值后，用T表示双出口），有两个出油口，可以设定为侧面或者上方输出；单出口（在工作片规格数值后，用S表示单出口），有一个出油口，它可以在工作片的任一端，而另一端需要堵塞。注意双出口工作片不能堵塞任一出口，否则会影响正常工作

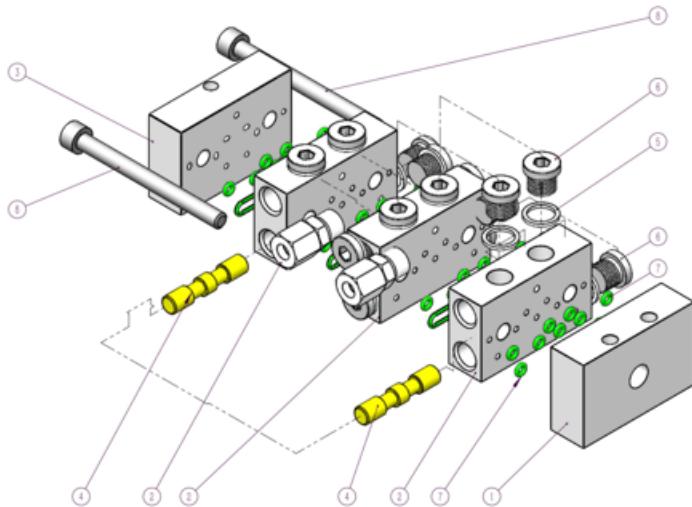

A typical VB distribution valve consists of a "first piece", a "tail piece" and 3 to 10 working pieces. Can provide 3 to 20 lubrication points of lubrication, VB distribution valve working piece, a variety of specifications of displacement for selection. The double outlet working piece (after the specification value of the working piece, the T represents the double outlet) has two oil outlets, which can be set as the side or upper output; the single outlet (after the specification value of the working piece, the S represents the single outlet) has one oil outlet, which can be at either end of the working piece, and the other end needs to be blocked. Note: that the double outlet working piece should not block any outlet, otherwise it will affect the normal operation.

可以轻松配置磁性和电子接近开关循环指示器，为成功润滑提供积极保障

Magnetic and electronic proximity switch cycle indicators can be easily configured to provide positive protection for successful lubrication

产品构成 Product composition:

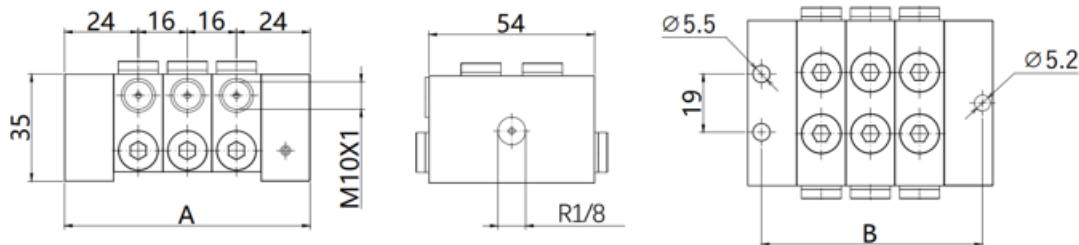

- 1 — 分配器首块
 2 — 分配器中间片
 3 — 分配器尾块
 4 — 柱塞
 5 — 垫片
 6 — 堵头
 7 — O型圈：氟橡胶
 8 — 螺杆

单线式润滑系统 Single line lubrication system

润滑介质为油或流动脂的小型润滑系统、满足小剂量、多点的润滑需要

For numerous lubrication points with smallest dosing quantities for delivering oil and fluid grease.

优点

- 多种类型的润滑点供应
- 最小剂量润滑
- 结构紧凑
- 适用于油或流动脂
- 经济成本低
- 安装便捷

The Advantages

- Connecting numerous lubrication points
- Smallest dosing quantities
- Compact construction
- For oil or fluid grease
- Cost-effective
- Easy assembly

系统组成

- 手动泵、气动泵、电动泵
- 分油块
- 计量阀
- 螺纹接头
- 管线
- 控制和检测装置

The system components

- Manual, pneumatic and electrical pumps
- Distributor strips
- Dosing valves
- Screwed fittings
- Lines
- Control and check devices

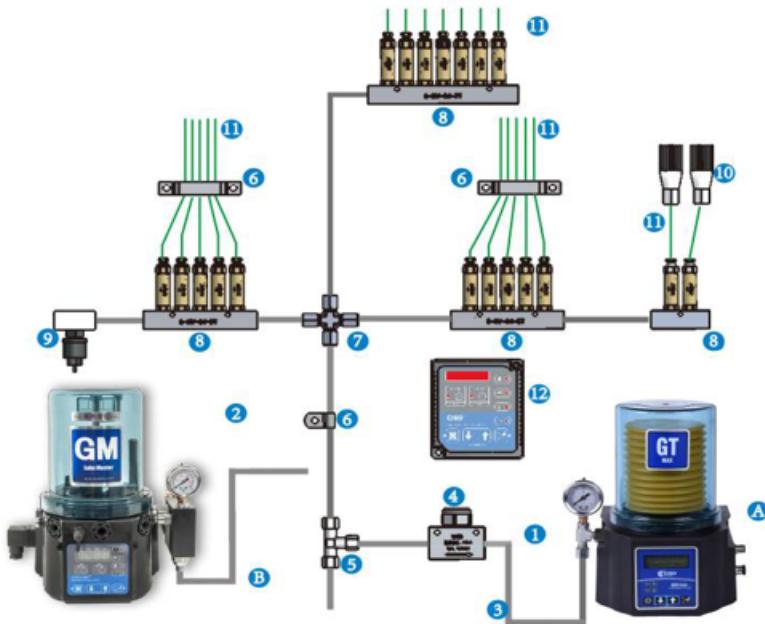

功能原理

计量阀安装在与泵连接的主管路上，计量阀具备一定的抗压力冲击、之后建立压力，压力将既定的润滑剂输送到润滑点。系统卸压时，一定剂量的润滑剂在计量阀内重新补足，用于下一次润滑。

The function

The dosing values are impinged on the main line with the pump – dynamically operating metering valves with a pressure surge, static operating dosing elements with slow pressure build-up. These thus transfer the respective quantity of the lubricant to the friction point. During the following relief phase, the lubricant is restocked in the dosing valves for the next lubrication process.

单线式润滑系统 Single line lubrication system

1. 应用 Application:

单线式润滑系统是机械行业应用最广泛的全损耗性润滑系统。

在一个设定的循环周期内，输送0.06-0.5ml的剂量的润滑油或流动润滑脂至润滑点，润滑点最高25bar的润滑压力，泵的压力是25-80bar。

The single line lubrication system is the most widely spread total loss lubrication system in the general engineering field.

Small quantities of oil or fluid grease are fed intermittently in the desired cycle time of the lubrication point. Example 5 to 1000 mm³ dosing volume, to 25 bar pressure at lubrication point, for a pump pressure of 25 to 80 bar.

特点：

- 多种类型润滑点供应
- 装配灵活
- 剂量精确
- 安装便捷
- 可进行定点喷射润滑

Special features:

- Supply to numerous lubrication points
- Flexible construction
- Exact dosing
- Easy expansion
- Point-target type of spraying possible, e.g. chain bolt lubrication

2. 工作原理 Mode of operation of the Ciso system :

泵从油箱泵出润滑剂，润滑剂通过卸压阀进入主管路，分油块和计量阀。系统建立压力后，在计量阀的控制下，润滑剂经过分管线被输送至润滑点。

The pump sucks the lubricant from the container. The lubricant reaches the main line, distributor strips and the dosing valves through the relief valve. For every pressure build-up controlled by the pressure control valve, the dosing valves deliver the lubricant to the lubrication point via the lubrication line

在自动控制系统内，压力开关控制系统压力的建立，每一个循环周期，泵开启关闭一次。系统内压力到达最远计量阀的时间与系统长度和润滑剂的粘度有关。

In an automatically operated system, the pressure build-up is controlled by a max. pressure switch and the electronics. The pump is switched-off after the pressure build-up and again switched-on after the end of the cycle time. Pressure build-up from the unit up to the farthest metering valve requires a specific time depending upon the length of the line and flowability of the lubricant.

油箱内通过液位开关控制润滑剂的存量。泵停止工作时，系统通过卸压电磁阀将压力降至1bar。成功卸压对于计量阀来说很重要，卸压指令是通过压力开关来实现的。

A level control monitors the constant level of the lubricant in the container. By stopping the pump, the

单线式润滑系统 Single line lubrication system

entire system is relieved using the relief valve at ca. 1 bar. This is important for the function of the dosing valve and can be controlled via a min. pressure switch.

3.设计 Design:

必须先确定润滑点和润滑要求，确定好润滑剂量和间隔时间。确定润滑点的要求时，最好满足小剂量，短循环的原则。同时也必须周全考虑主管路的卸压时间，流动脂的卸压时间，因为温度、管线很长从而导致加时。主管路和计量阀的布局需设计系统留有排风口，从而是初次使用系统时使用。系统内必须无气体杂质。

The first, determine the lubrication point,lubrication requirements, the lubrication and interval time.When determining the lubrication point requirements, it is best to meet the principle of small dose, short cycle.At the same time, the unloading time of the main road and the unloading time of the flowing grease must be taken into account, because of the temperature and the long pipeline, which leads to extra time.The main line and the dosing valve are laid such that self-venting is possible,On the main line end and higher points of the system, dosing valves must be arranged without outlets on the top.There must no air inclusions.

系统内的压力应保持在低压状态，由此新建压力可以快速传达直至系统末端。润滑剂粘度越大，选用直径越大的管路。若泵的排量大于系统所需要的剂量，而且压力开关失效，那么润滑剂将从卸荷阀排出，从而避免泵压力越来越大造成损伤。

The pipeline resistance of the system must be kept as little as possible so that pressure can build-up quickly at the end of the line.The more viscous the lubricant, the bigger should the line cross section be designed.If the pump delivers a flow rate much more than the system can take, and the pressure switch fails,then the lubricant will be discharged from the unloading valve to avoid damage caused by increasing pump pressure.

管路尺寸如下所示 Line dimensioning:

主管路

高压树脂软管	11X6mm	用于主管路大于15米
高压树脂软管	8.6X4.2mm	用于主管路大于10米
钢管	6X1mm 8X1mm	用于主管路小于10米
尼龙管	6X1.2mm	用于主管路小于10米

分管路

尼龙管	4X0.75mm
金属管	4X0.7mm

Main line:

High pressure resin hose	11X6mm	For main road > 15 m
High pressure resin hose	8.6X4.2mm	For main road > 10 m
Steel pipe	6X1mm 8X1mm	For main road < 10 m
Nylon pipe	6X1.2mm	For main road < 10 m

Lubrication lines:

Nylon pipe	4X0.75mm
metallic pipe	4X0.7mm

单线式润滑系统 Single line lubrication system

主管路应尽量短，尤其是使用黏性较高的润滑剂时。同时分支管路最好不要超过三米。

大型系统或者润滑剂黏性较高的时，建议进行预测试。这样就能确定压力建立时间和卸压时间。

Generally, the lines should be kept as short as possible particularly for viscous lubricants. Moreover, individual lubrication lines must not be longer than 3 m.

Pretests on an design true to the original are required for large systems or highly viscous lubricants.

Pressure build-up and relief time must be determined here.

4. 润滑剂 Lubricant:

在大多数情况下，我们的系统使用流动NLGI000-1号润滑脂，确保润滑剂内没有其他的添加剂也非常重要，因为这些添加剂可能会对泵及分配阀的密封元件产生影响。我们可以为客户提供润滑剂的工厂内测试，如遇到特殊润滑剂进行系统测试，请联系销售人员。

Generally, NO.NLGI000-1 Flowing lubricating grease is used in our lubrication system. However, attention should be paid that these NBR seals are not affected. The function of synthetic lubricants or mineral oils can be checked with aggressive additives, on request. We can provide our customers with in-factory testing of lubricants. If you need special lubricants for system testing, please contact sales staff.

请注意！ Attention:

请勿混合不同的润滑剂！在注入新的油脂前务必保持整个系统的清洁。

流动脂不可与不兼容性的皂基混合。

do not possibly mix different lubricants! Ideally, the system must be cleaned.

No way must greases be mixed with non-compatible types of soaps.

5. 安装 Assembly:

请遵循润滑系统的常规安装清洁步骤，系统内不得存在杂质铁屑，切管后尤其注意！

参考机械手册的扭转力矩，使用铜件时候尤其注意。

尼龙管内要配置相应的铜衬套。

In principle, cleanliness customary to the hydraulic system must be observed. There should be no impurity iron filings in the system, especially after pipe cutting!

Refer to the mechanical manual for torque, especially when using copper fittings.

Nylon pipe to be equipped with the corresponding copper bushing.

GT-MAX 润滑泵 GT-MAX Lubrication pump

GT-MAX可以提供两种不同的控制方式：

1、**简易型**, 需要外部PLC进行控制, 配备简易面板, 提供本地运行指示及低液位峰鸣报警,

2、**自动型**, 人性化的中英文液晶显示屏, 控制模式易于操作, 强大的数据系统提供实时数据.

GT-MAX have two different versions:

1. **Simplicity**, which needs external PLC for control, equipped with a suggestion panel, providing local operation indication and peak alarm of low liquid level.

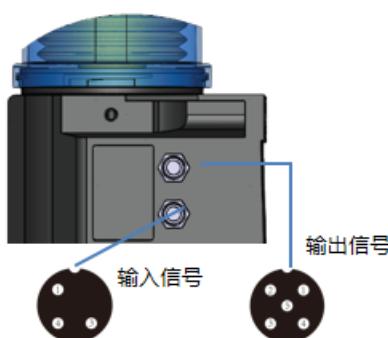

2. **Automatic**, humanized LCD screen in Both Chinese and English, easy to operate control mode, powerful data system provides real-time data.

此系统是一种周期润滑系统, 由润滑泵、计量阀、相关管接件和控制部分等部件组成。润滑泵输出压力油, 计量阀将润滑剂定量地输送至各润滑部位。系统中可设置压力开关(可选件), 使润滑系统断流、失压、计量阀及主油管连接处泄露等得以监测, 并可根据各润滑点的实际需油量选择相应的计量阀。管线可以选择尼龙管, 铜管, 也可选择高压树脂柔性软管。This system is a periodic lubrication system, which is composed of lubrication pump, metering valve, related pipe fittings and control parts. The lubrication pump outputs pressure oil, and the metering valve delivers lubricant quantitatively to each lubrication part. Pressure switch can be set in the system (optional), so that the lubrication system flow, pressure loss, metering valve and leakage of the main oil pipe connection can be monitored, and the corresponding metering valve can be selected according to the actual oil demand of each lubrication point. Pipeline can choose nylon pipe, copper pipe, also can choose high pressure resin flexible hose.

- 开盖前清理残余灰尘，防止杂质进入泵内。
注意加油方法，杂质进入不等于三包；
- 沉降油（脂）液位低于MIN最低液位线时要
及时补油，补油不能高于MAX最高液位线，
否则会有机油溢出；
- 严禁使用酒精擦拭泵盖，可能会缩短泵的
使用寿命；

GTS 电动润滑泵

- 可输送稀油和油脂
- 多样的补脂方式
- 强大的集中控制系统
- 多种电压可选

特性

Characteristics

- 可输送稀油和油脂
- Pump oil and grease
- 容积 Reservoirs:

 - 2L
 - 4L
 - 6L
 - 8L

- 电压 Voltages:

 - 12VDC
 - 24VDC
 - 220V

- 多种补脂方式
- Multiple grease filling ways
- 强大的集中控制系统
- Powerful centralized control system
- CE 认证
- CE Certification
- 专利证书
- Design patent
- IP65

产品应用

- Applications
- 重型车辆
- Heavy VEHICLES
- 重工业
- Heavy industries
- 链条&齿轮
- Chain&Gear
- 机床
- Machine tools
- 移动式厂房机械
- Mobile plant machine

泵体坚固 功能强大

THE SMALL PUMP

PACKAGE

WITH BIG FEATURES

GTS是一款高压柱塞泵，最多可配五个泵元件。其设计特别适用于单线系统。

GTS pump is a piston pump predisposed to operate with a maximum of five pumping units. Its design is particularly suitable for single-line systems.

具备两种型号模式

标准: 由外部PLC管理。不带内置控制单元，因此是润滑系统中更加经济的解决方案。

自动: 带集成控制系统，可本地设置运行时间。配备本地运行及报警指示灯，报警带蜂鸣，提供低液位及脉冲报警，可与分配元件的监控器组合成一套完美的运行系统。

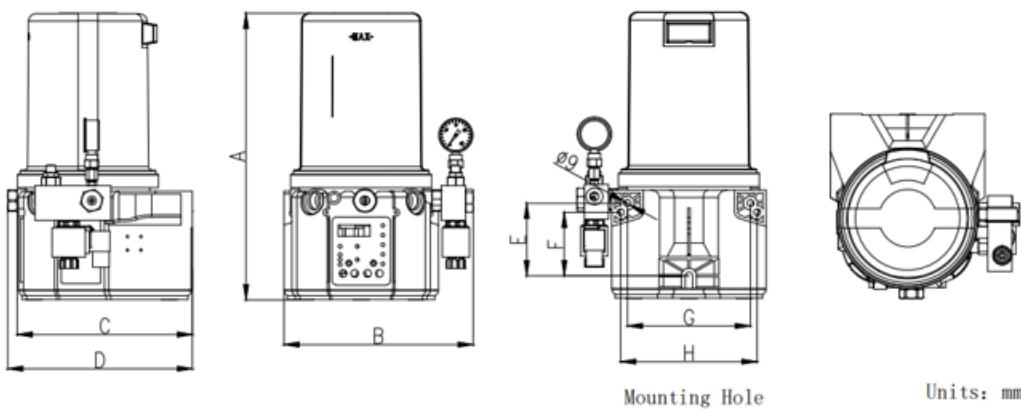

Standard: can be managed by an external PLC. Since it does not come with an internal control unit, this is the most economic solution for lubricating your systems.

Automatic: With integrated control system, which can be set up local running time. Equipped with local operation and alarm light, alarm with buzzer, provide low level and pulse alarm, which can be combined with the monitor of distribution units into a perfect operating system.

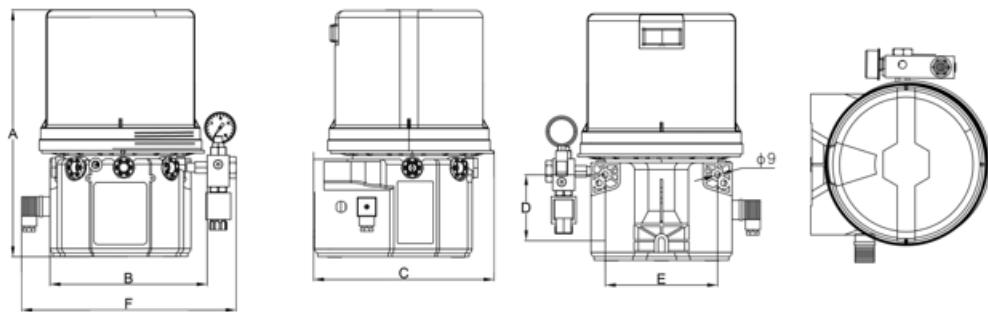

技术参数
Technical characteristics

电压 Voltages	12VDC、24VDC、220V
泵出口单元 Unit of pump outlet	1
出口螺纹尺寸 Outlet thread	G1/4
排量 Output	Max. 15 ml/min(1个泵元件 one pump element)
工作压力 Operating pressure	±70 to 150bar (可调) adjustable from ±70 to 150bar
容积 Reservoir Capacity	2L、4L、6L、8L
润滑剂 Lubricants	OIL、000、00、0、1
工作温度 Operating temperatures	-40 - 90°C

产品尺寸 Dimensions:

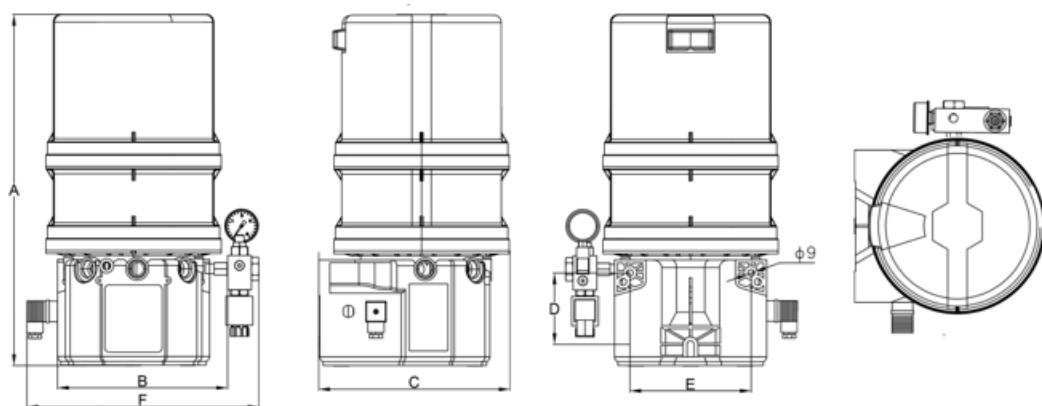

容积 Reservoirs	A	B	C	D	E	F	G	H
2L	338	255	231.5	248	95.5	83.5	162.5	180
4L	378	255	231.5	248	95.5	83.5	162.5	180

容积 Reservoirs	A	B	C	D	E	F
6L	375.5	243	261.2	95.5	162.5	311

产品尺寸 Dimensions:

容积 Reservoirs	A	B	C	D	E	F
8L	470	243	261.2	95.5	162.5	311

适用于单线式润滑系统

Metering Valves For Single Line Lubrication System

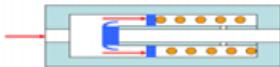

工作原理 Working principle:

位置1：起始位、主管路开，计量阀在起始位置，单向阀关闭

Position 1:

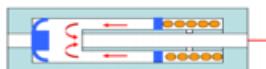

Initial position.Main line is ventilated. Return valve in the initial position.

位置2：计量冲程开始，单向阀处于交替位置，润滑油注入

Position 2:

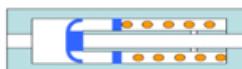

Dosing through pulse initiated.Return valve in the restacking position.Fill lubricant.

位置3：置换计量，卸压后，置换等量润滑油进入阀芯内

Position 3:

Dosing.Return valve encircles the main line.Spring force of the seal doses the lubricant.

位置4：复位到初始位置

Position 4:Back to the initial position.

特性

- 加压定量分配阀
- 供单线式系统使用
- 可靠高效
- 操作压力：动作压力 > 1.5Mpa
回复压力 < 0.5Mpa
- 计量精确，性能稳定
- 双重密封、无泄漏

Characteristics

- Pressurized ration distribution valve
- For Single Line Lubrication System
- Reliable and efficient
- Operating pressure: action pressure > 1.5MPa
back pressure < 0.5MPa
- Measured Accurately Stable performance
- Dual-seal, Leak-tightness

MV VALVE

加压定量分配阀

Pressurized ration distribution
valve

动作压力: $\geq 1.5\text{MPa}$

回复压力: $\leq 0.5\text{MPa}$

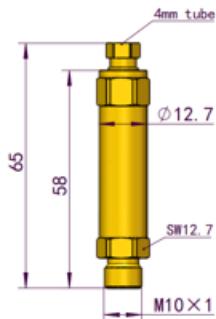

标准出口: 4mm

MV 计量阀

适用于单线式系统的精确计量元件

Accurate Dosing Elements For Single Line Lubrication System

"MV计量阀" 是一款适用经济型的轻型设备的分配元件。

标准配置材质为铜，可定制碳钢材质。

"MV Metering Valves" Is a distribution elements for economical light equipment. Carbon steel can be customized.

Standard material is Brass.

动作压力：大于等于1.5MPa

回复压力：小于等于0.5MPa

标准出口为4mm，可以选择卡套或快插

Action pressure: ≥1.5MPa

Back pressure: ≤0.5MPa

Standard outlet: 4mm,sleeve or ferrule for choice

特性

- 加压定量分配阀
- 供单线式系统使用
- 标准材质铜
- 运行温度:-30 ~ +170°C
- 可靠高效
- 计量精确，性能稳定
- 双重密封、无泄漏
- Pressurized ration distribution valve
- For Single Line Lubrication System
- Standard material : Brass
- Operating temperature : -30 ~ +170°C
- Reliable and efficient
- Measured Accurately,Stable performance
- Dual-seal、Leak-tightness

VL-32

VALVE

配备1至4个端口(润滑点)

Shipped with manifolds from 1 to 4
ports to match number of lube points

排量可调

Metering quantity adjustable

VL-32 系列计量装置

VL-32计量装置的设计目的是通过进料管线压力将润滑剂输送到摩擦点。

VL-32 injector has been designed to deliver lubricant to friction points through the feeding line pressure.

这些注入器配有过视化的内置液位指示器，以监控操作情况。

These injectors are supplied with visual in-built level indicators to monitoring the operation.

VL-32计量装置有不同的型号:从一个到四个出口。安装在分油块上的每个计量装置都可以轻松更换或检查，无需拆卸设备或操作配件和油管。

VL-32 injector is available in different models: from one to four outlets. Every injector mounted on a manifold can be easily replaced or inspected without disassembling the unit or operating on fittings and tubings.

这些装置可以安装在任何位置，如果需要，也可以与其他类型的计量装置一起使用。

These units can be installed in any position and can be used with other types of injectors, if necessary.

特点与优势

Features and benefits

- 配备1至4个端口(润滑点)

Shipped with manifolds from 1 to 4 ports to match number of lube points

- 输出外部可调

Output is externally adjustable

- 指示器阀杆允许目视检查运行情况

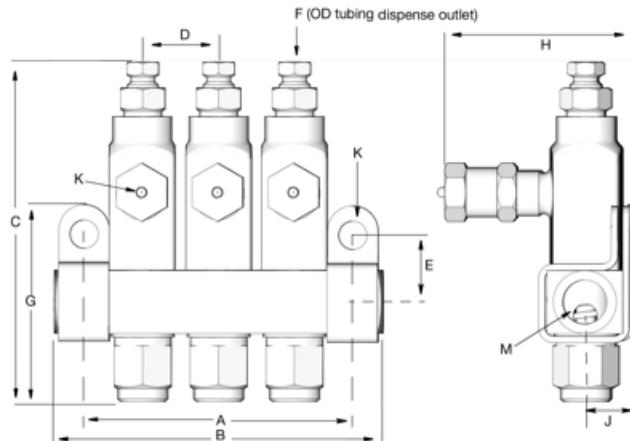

Indicator stem permits visual check of operation

- 能轻易拆下检查或更换

Can be removed easily for inspection or replacement

VL-1

VALVE

配备1至6个端口(润滑点)

Shipped with manifolds from 1 to 6 ports
(lubrication points)

排量可调

Metering quantity adjustable

VL-1、VL-1X 系列计量装置

适用于单线高压集中润滑系统

For use in single-line lubrication systems

输送润滑油粘度可达NLGI 2。输出外部可调。指示器引脚允许目视检查计量设备的操作。

单独的计量装置可以很容易地拆卸检查或更换。

The series VL-1、VL-1X metering devices are for single-line, high-pressure centralized lubrication systems dispensing lubricants compatible with fluoroelastomer packings and viscosity up to NLGI 2. Output is externally adjustable. An indicator pin permits visual check of metering device operation. Individual metering devices can be removed easily for inspection or replacement.

特性

- 配备1至6个端口(润滑点)

Shipped with manifolds from 1 to 6 ports (lubrication points)

- 输出外部可调

Output is externally adjustable

- 每个指示器引脚允许目视检查注入器运行情况

Each indicator pin permits visual check of injector operation

- 单个计量装置可随意拆卸检查或更换

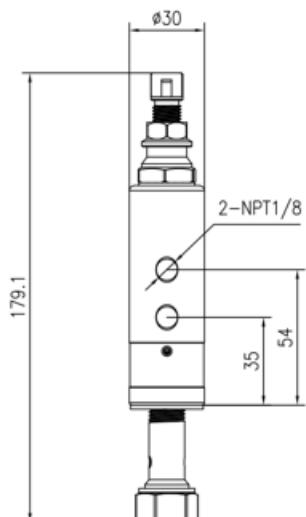

Individual metering devices can be removed easily for inspection or replacement

加长管件总成

Extension fitting assembly

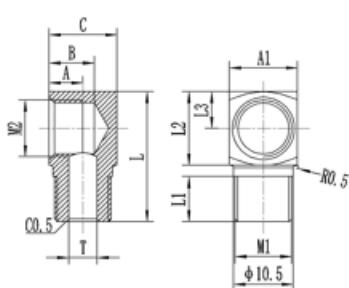

型号 Part number	管径 OD	管径 OD	材质 Material	型号 Part number	管径 OD	外螺纹 Thread M	材质 Material
5D0404	Ø4	Ø4	碳钢镀白锌 Zinc plated	5KM0602	Ø6	R1/8	碳钢镀白锌 Zinc plated
5D0406	Ø4	Ø6	碳钢镀白锌 Zinc plated	5KM0610	Ø6	M10*1	碳钢镀白锌 Zinc plated
5D0606	Ø6	Ø6	碳钢镀白锌 Zinc plated	5KM0608	Ø6	M8*1	碳钢镀白锌 Zinc plated
5D0608	Ø6	Ø8	碳钢镀白锌 Zinc plated	5KM0606	Ø6	M6*1	碳钢镀白锌 Zinc plated
5D0808	Ø8	Ø8	碳钢镀白锌 Zinc plated	5KM0402	Ø4	R1/8	碳钢镀白锌 Zinc plated
				5KM0410	Ø4	M10*1	碳钢镀白锌 Zinc plated
				5KM0408	Ø4	M8*1	碳钢镀白锌 Zinc plated
				5KM0406	Ø4	M6*1	碳钢镀白锌 Zinc plated

过渡接头 Ellbow Connector 45°

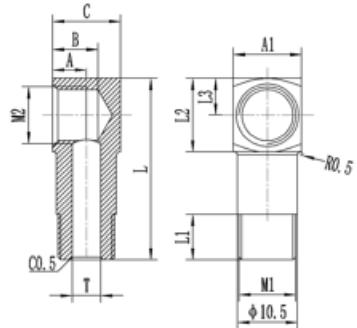

型号 Part number	M1	M2	L	L1	L2	L3	L4	A	B	C
5EM0410	M10*1	M8*1	23	6.5	13	7	12	7	6	7

90°异径弯头接头 Angle Connector 90°

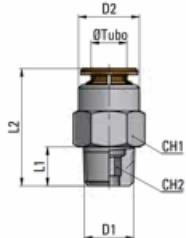

9GM10

9GM10-Z

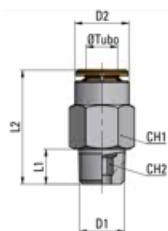

型号 Part number	M1	M2	L	L1	L2	L3	A	B	C	A1
9GM10	ZM10*1	M10*1	23	8	13	6.5	6	8	12	12
9GM10-Z	ZM10*1	M10*1	32	8	13	6.5	6	8	12	12

MP11 直通快插 Taper Straight,Male 中压10Mpa

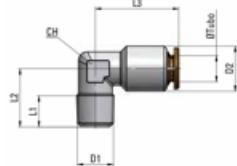

型号 Part number	管径 OD	D1	D2	L1	L2
MP110418	Ø4	R1/8	9	7.5	18.5
MP1104M6	Ø4	M6*1.0	9	8	23
MP1104M8	Ø4	M8*1.0	9	8	20
MP1104M10	Ø4	M10*1.0	9	8	20
MP110618	Ø6	R1/8	12	7.5	21.5
MP1106M6	Ø6	M6*1.0	12	8	25.5
MP1106M8	Ø6	M8*1.0	12	8	25.5
MP1106M10	Ø6	M10*1.0	12	8	22

HP11 直通快插 Taper Straight,Male 高压25Mpa

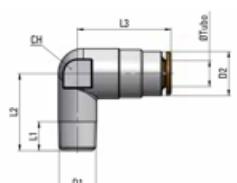

型号 Part number	管径 OD	D1	D2	L1	L2
HP110418	Ø4	R1/8	9.5	7.5	21
HP1104M6	Ø4	M6*1.0	9.5	8	25
HP1104M8	Ø4	M8*1.0	9.5	8	25
HP1104M10	Ø4	M10*1.0	9.5	8	22.5
HP110618	Ø6	R1/8	11.5	7.5	24
HP1106M6	Ø6	M6*1.0	11.5	8	28
HP1106M8	Ø6	M8*1.0	11.5	8	28
HP1106M10	Ø6	M10*1.0	11.5	8	24.5

MP14 - 直角快插 Taper Elbow Fitting,Male 10Mpa

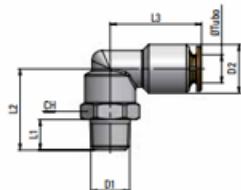

型号 Part number	管径 OD	D1	D2	L1	L2
MP140418	Ø4	R1/8	9	7.5	15.5
MP1404M6	Ø4	M6*1.0	9	8	17
MP1404M8	Ø4	M8*1.0	9	8	17
MP1404M10	Ø4	M10*1.0	9	8	18
MP140618	Ø6	R1/8	12	7.5	15.5
MP1406M6	Ø6	M6*1.0	12	8	17
MP1406M8	Ø6	M8*1.0	12	8	17
MP1406M10	Ø6	M10*1.0	12	8	18

HP14 - 直角快插 Taper Elbow Fitting,Male 25Mpa

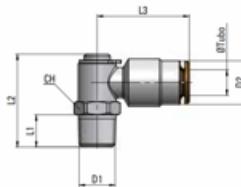

型号 Part number	管径 OD	D1	D2	L1	L2
HP140418	Ø4	R1/8	9.5	7.5	17
HP1404M6	Ø4	M6*1.0	9.5	8	17
HP1404M8	Ø4	M8*1.0	9.5	8	17
HP1404M10	Ø4	M10*1.0	9.5	8	18
HP140618	Ø6	R1/8	11.5	7.5	20
HP1406M6	Ø6	M6*1.0	11.5	8	20
HP1406M8	Ø6	M8*1.0	11.5	8	20
HP1406M10	Ø6	M10*1.0	11.5	8	21

MP15 - 直角快插 可旋转接头 Taper Elbow Fitting,Male,Rotatable 10Mpa

型号 Part number	管径 OD	D1	D2	L1	L2
MP150418	Ø4	R1/8"	9	7.5	20
MP1504M6	Ø4	M6*1.0	9	8	20.5
MP1504M8	Ø4	M8*1.0	9	8	20.5
MP1504M10	Ø4	M10*1.0	9	8	20.5
MP150618	Ø6	R1/8"	12	7.5	20
MP1506M6	Ø6	M6*1.0	12	8	21.5
MP1506M8	Ø6	M8*1.0	12	8	21.5
MP1506M10	Ø6	M10*1.0	12	8	21.5

HP18 - 直角快插 可旋转接头 Taper Elbow Fitting,Male,Rotatable 25Mpa

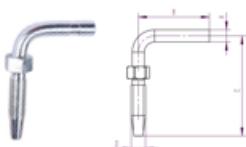

型号 Part number	管径 OD	D1	D2	L1	L2
HP180418	Ø4	R1/8"	9.5	8.5	22
HP1804M6-1	Ø4	M6*0.75	9.5	6	22
HP1804M6	Ø4	M6*1	9.5	8	22
HP1804M8	Ø4	M8*1	9.5	8	22
HP1804M10	Ø4	M10*1	9.5	8	22
HP180618	Ø6	R1/8"	11.5	8.5	24
HP180614	Ø6	R1/4"	11.5	11	24
HP1806M6	Ø6	M6*1	11.5	8	24
HP1806M8	Ø6	M8*1	11.5	8	24
HP1806M10	Ø6	M10*1	11.5	8	24

直涨芯 Hose coupling straight

型号 Part number	A	B	C	D	材质 Material
ZZ06	Ø6	60	30	M7*1	
ZZ06-1(短 Short)	Ø6	54.5	21.5	M7*1	
ZZ0610	Ø6	63	30	M10*1	
ZZ08	Ø8	63	30	M10*1	

弯涨芯 Hose coupling bent

型号 Part number	A	B	C	D	材质 Material
WZ06	Ø6	32	45	M7*1	
WZ0610	Ø6	32	45	M10*1	
WZ06-1(短 Short)	Ø6	20	45	M7*1	
WZ08	Ø8	35	50	M10*1	

135°弯涨芯 135°Hose coupling bent

型号 Part number	接管 OD	B	C	D	材质 Material
WZ13506	Ø6	30	36	M7*1	碳钢镀白锌 Zinc plated

涨套 Threaded sleeve

堵头 Outlet plug

30Mpa

5PG10

5PC10

型号 Part number	接管 OD	螺纹 Thread	材质 Material	型号 Part number	接管 OD	材质 Material	说明
WO06	Ø6	M7*1	碳钢镀锌 Zinc plated	5PG10	M10*1	碳钢镀锌镍 Nickel plated	适用DSP分配器 to DSP distributor
WO08	Ø8	M10*1		5PC10	M10*1	碳钢镀锌 Zinc plated	适用VB分配器 to VB distributor

螺母 Ferrule

卡套 Nuts

型号 Part number	螺纹 Thread	管子外径D TUBE O.D.	压力等级 MPa	型号 Part number	管子外径D TUBE O.D.	压力等级 MPa
NLL-08	M8*1	Ø4	超轻系列 Super light series LL	RLL-04	Ø4	超轻系列 Super light series LL
NLL-10	M10*1	Ø6		RLL-06	Ø6	
NL-12	M12*1.5	Ø6	轻系列 Light series L	RL-06	Ø6	轻系列 Light series L
NL-14	M14*1.5	Ø8		RL-08	Ø8	
NL-16	M16*1.5	Ø10		RL-10	Ø10	
NL-18	M18*1.5	Ø12		RL-12	Ø12	

润滑系统配件 Lubrication parts

平端堵塞 Plane-end plug

套管堵塞 Sleeve pipe plug

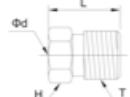

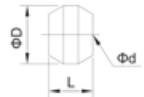

型号 Part number	L	T	H
3G0408	12	M8*1.0	8
3G0601	14	PT1/8"	10

型号 Part number	L	T	H
3G04	16	M8*1.0	8
3G06	17	M10*1.0	10

套管 Sleeve pipe

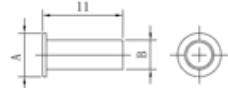

套管帽 Sleeve pipe cap

型号 Part number	OD	Od	ØD	L
3B04	4	4.1	6	4.5
3B06	6	6.1	8	5
3B08	8	8.1	11	7
3B10	10	10.1	13.5	8

型号 Part number	OD	Od	L	H	T
3A04	4	4.1	12	8	M8*1.0
3A06	6	6.1	12.5	10	M10*1.0
3A08	8	8.1	14	14	M14*1.5
3A10	10	10.1	15	16	M16*1.5

管内衬 Inner screw of pipe

型号 Part number	A	B
BF04	4	2
BF0425	4	2.5
BF06	6	4
BF0630	6	3

高压树脂软管 (最高压力840BAR)
High-pressure flexible pipe

尼龙管 (BP为黑色 WP为白色)
Nylon tubing (BP in black; WP in white)

型号 Part number	管外径 Outer diameter	管内径 Inside diameter
T-HP03	Ø6	Ø3
T-HP04	Ø8.6	Ø4
T-HP06	Ø11	Ø6.3

型号 Part number	管外径 Outer diameter	管内径 Inside diameter
T-BP06	Ø6	Ø3
T-BP04	Ø4	Ø2.5
T-WP06	Ø6	Ø4
T-WP04	Ø4	Ø2

钢管 (镀白锌) Steel tubing

弹簧护套 (镀白锌) Spring coil

型号 Part number	管外径 Outer diameter	管内径 Inside diameter
T-CP04	Ø4	Ø2
T-CP06	Ø6	Ø4
T-CP08	Ø8	Ø6
T-CP10	Ø10	Ø8

型号 Part number	Ød	适合管外径 Suitable pipe outer diameter
THT04	4.5	4
THT06	6.5	6
THT08	11	9.3

螺旋胶管护套 Hose plastic jacket

R型管夹 R Pipe clamp

型号 Part number	Ød	适合管外径 Suitable pipe outer diameter
THL08	8	8.6
THL10	10	11
THL12-1	11	12

扎带 Cable tie

型号 Part number	宽 Width	长 Length	材质 Material
ZDCH5200	5	200	尼龙 Nylon
ZDCH5300	5	300	
ZDCH5500	5	500	

型号 Part number	Ød	安装孔 Mounting hole
RC06	6	6.4mm
RC08	8	6.4mm
RC10	10	6.4mm
RC12	12	6.4mm
RC14	14	6.4mm
RC16	16	6.4mm
RC18	18	6.4mm
RC20	20	6.4mm
RC22	22	6.4mm
RC25	25	6.4mm
RC28	28	6.4mm
RC30	30	6.4mm
